Vision: A Computational Investigation into the Human Representation and Processing of Visual Information (MIT Press) David Marr, Shimon Ullman, Tomaso A. Poggio

David Marr's posthumously published *Vision* (1982) influenced a generation of brain and cognitive scientists, inspiring many to enter the field. In *Vision*, Marr describes a general framework for understanding visual perception and touches on broader questions about how the brain and its functions can be studied and understood. Researchers from a range of brain and cognitive sciences have long valued Marr's creativity, intellectual power, and ability to integrate insights and data from neuroscience, psychology, and computation. This MIT Press edition makes Marr's influential work available to a new generation of students and scientists. In Marr's framework, the process of vision constructs a set of representations, starting from a description of the input image and culminating with a description of three-dimensional objects in the surrounding environment. A central theme, and one that has had far-reaching influence in both neuroscience and cognitive science, is the notion of different levels of analysis -- in Marr's framework, the computational level, the algorithmic level, and the hardware implementation level. Now, thirty years later, the main problems that occupied Marr remain fundamental open problems in the study of perception. *Vision* provides inspiration for the continuing efforts to integrate knowledge from cognition and computation to understand vision and the brain.

From reader reviews:

Thersa Davenport:

Have you spare time for any day? What do you do when you have considerably more or little spare time? Yeah, you can choose the suitable activity for spend your time. Any person spent all their spare time to take a walk, shopping, or went to typically the Mall. How about open or read a book allowed Vision: A Computational Investigation into the Human Representation and Processing of Visual Information (MIT Press)? Maybe it is to become best activity for you. You already know beside you can spend your time using your favorite's book, you can more intelligent than before. Do you agree with it is opinion or you have different opinion?

Phillip Chadwick:

This Vision: A Computational Investigation into the Human Representation and Processing of Visual Information (MIT Press) book is absolutely not ordinary book, you have it then the world is in your hands. The benefit you have by reading this book is definitely information inside this reserve incredible fresh, you will get information which is getting deeper anyone read a lot of information you will get. This kind of Vision: A Computational Investigation into the Human Representation and Processing of Visual Information (MIT Press) without we recognize teach the one who examining it become critical in thinking and analyzing. Don't become worry Vision: A Computational Investigation into the Human Representation and Processing of Visual Information (MIT Press) can bring once you are and not make your carrier space or bookshelves' become full because you can have it inside your lovely laptop even cell phone. This Vision: A Computational Investigation into the Human Representation and Processing of Visual Information (MIT Press) having great arrangement in word as well as layout, so you will not experience uninterested in reading.

Tammy Campbell:

The book untitled Vision: A Computational Investigation into the Human Representation and Processing of Visual Information (MIT Press) contain a lot of information on the idea. The writer explains the girl idea with easy method. The language is very easy to understand all the people, so do not really worry, you can easy to read the idea. The book was compiled by famous author. The author gives you in the new age of literary works. You can actually read this book because you can please read on your smart phone, or model, so you can read the book throughout anywhere and anytime. In a situation you wish to purchase the e-book, you can start their official web-site and order it. Have a nice go through.

Josette Leonard:

Beside this kind of Vision: A Computational Investigation into the Human Representation and Processing of Visual Information (MIT Press) in your phone, it could give you a way to get nearer to the new knowledge or

facts. The information and the knowledge you may get here is fresh through the oven so don't always be worry if you feel like an previous people live in narrow commune. It is good thing to have Vision: A Computational Investigation into the Human Representation and Processing of Visual Information (MIT Press) because this book offers to your account readable information. Do you often have book but you would not get what it's interesting features of. Oh come on, that will not end up to happen if you have this within your hand. The Enjoyable option here cannot be questionable, including treasuring beautiful island. Techniques you still want to miss it? Find this book and read it from at this point!
