Macrophytes in Aquatic Ecosystems: From Biology to Management: 190 (Developments in Hydrobiology) J.M. Caffrey, A. Dutartre, J. Haury, K.M. Murphy, P.M. Wade

Macrophytes and macrophytes ecology have gained an added importance with the introduction of, and legal requirement to implement, the European Water Framework Directive. This reflects the valuable role that aquatic plant communities play in assessing the ecological status of water bodies. Significant changes in the status and general abundance of these communities has been recorded in the last three decades, consequent on such factors as global warming and, increasingly, on the spread of aggressive alien species. These changes have been most felt in those waters that are exploited for amenity and recreational pursuits. The increased biomass of aquatic vegetation in water bodies has adversely impacted on leisure use of these systems but also on their use for agricultural, flood relief, municipal and domestic purposes. The loss to national economies resulting from this excessive plant biomass has been appreciable and has put pressure on water managers to develop weed control procedures that are efficient, environmentally sensitive and cost-effective. The results from the most up-to-date research activities and field trials of leading aquatic plant scientists and managers in all five continents, aimed at resolving these weed problems, has been drawn together in this volume. The title of this special issue, 'Macrophytes in aquatic ecosystems: from biology to management', is wide-ranging and reflects the broad scope and scale of the papers presented therein. It further recognises the old paradigm: 'knowledge to achieve management and management to achieve knowledge'.

From reader reviews:

Jonathan Nelson:

Do you have favorite book? In case you have, what is your favorite's book? Reserve is very important thing for us to know everything in the world. Each reserve has different aim or even goal; it means that book has different type. Some people sense enjoy to spend their a chance to read a book. These are reading whatever they get because their hobby is usually reading a book. Think about the person who don't like reading through a book? Sometime, man or woman feel need book after they found difficult problem or even exercise. Well, probably you should have this Macrophytes in Aquatic Ecosystems: From Biology to Management: 190 (Developments in Hydrobiology).

Matthew Blackburn:

The guide with title Macrophytes in Aquatic Ecosystems: From Biology to Management: 190 (Developments in Hydrobiology) has lot of information that you can study it. You can get a lot of help after read this book. This kind of book exist new information the information that exist in this reserve represented the condition of the world right now. That is important to yo7u to know how the improvement of the world. This specific book will bring you inside new era of the internationalization. You can read the e-book on your smart phone, so you can read the idea anywhere you want.

Eva Oleary:

People live in this new morning of lifestyle always aim to and must have the extra time or they will get lots of stress from both way of life and work. So , once we ask do people have extra time, we will say absolutely yes. People is human not a robot. Then we consult again, what kind of activity have you got when the spare time coming to an individual of course your answer will certainly unlimited right. Then do you ever try this one, reading guides. It can be your alternative in spending your spare time, the actual book you have read is usually Macrophytes in Aquatic Ecosystems: From Biology to Management: 190 (Developments in Hydrobiology).

Moses Bean:

What is your hobby? Have you heard that will question when you got students? We believe that that question was given by teacher for their students. Many kinds of hobby, Every person has different hobby. And you also know that little person including reading or as studying become their hobby. You have to know that reading is very important and book as to be the factor. Book is important thing to include you knowledge, except your own personal teacher or lecturer. You find good news or update concerning something by book. A substantial number of sorts of books that can you take to be your object. One of them is Macrophytes in Aquatic Ecosystems: From Biology to Management: 190 (Developments in Hydrobiology).
