Mechanisms and Regulation of Carbohydrate Transport in Bacteria Milton H. Saier

Mechanisms and Regulation of Carbohydrate Transport in Bacteria reviews the developments in the study of the mechanisms and regulation of carbohydrate transport in prokaryotic organisms.

The book presents the progress made in the understanding of transport and regulation of carbohydrates in bacteria in the molecular level. Aspects on the important structural and topographical features of several sugar permeases in *Escherichia coli* are elucidated; the energy-coupling processes are clearly delineated for most (but not all) types of bacterial carbohydrate permease systems; and mechanistic details of the translocation processes are proposed.

Molecular biologists, microbial biochemists, and cell biologists will find the book a good source of information.
