Science, Technology, and the Art of Medicine contains papers by eminent scholars who discuss issues and concepts regarding the character of medicine. Special attention is given to the extent to which medicine is a science, art, and technology. Investigations are carried out with a particular focus on the nature of medical knowledge. Concepts of medical research, medical causality, intuition, and medical decision-making are examined in the light of medicine's revolutionary advances in the twentieth century. Past perspectives and present perplexities are also examined, bringing together a volume in the philosophy of medicine that treats a broad range of issues in medical epistemology and practise in a careful, critical fashion.
