Nonlinear Programming: Theory and Algorithms

Mokhtar S. Bazaraa, Hanif D. Sherali, C. M. Shetty

Nonlinear Programming: Theory and Algorithms Mokhtar S. Bazaraa, Hanif D. Sherali, C. M. Shetty
COMPREHENSIVE COVERAGE OF NONLINEAR PROGRAMMING THEORY AND ALGORITHMS, THOROUGHLY REVISED AND EXPANDED

Nonlinear Programming: Theory and Algorithms—now in an extensively updated Third Edition—addresses the problem of optimizing an objective function in the presence of equality and inequality constraints. Many realistic problems cannot be adequately represented as a linear program owing to the nature of the nonlinearity of the objective function and/or the nonlinearity of any constraints. The *Third Edition* begins with a general introduction to nonlinear programming with illustrative examples and guidelines for model construction.

Concentration on the three major parts of nonlinear programming is provided:

- Convex analysis with discussion of topological properties of convex sets, separation and support of convex sets, polyhedral sets, extreme points and extreme directions of polyhedral sets, and linear programming
- Optimality conditions and duality with coverage of the nature, interpretation, and value of the classical Fritz John (FJ) and the Karush-Kuhn-Tucker (KKT) optimality conditions; the interrelationships between various proposed constraint qualifications; and Lagrangian duality and saddle point optimality conditions
- Algorithms and their convergence, with a presentation of algorithms for solving both unconstrained and constrained nonlinear programming problems

Important features of the *Third Edition* include:

- New topics such as second interior point methods, nonconvex optimization, nondifferentiable optimization, and more
- Updated discussion and new applications in each chapter
- Detailed numerical examples and graphical illustrations
- Essential coverage of modeling and formulating nonlinear programs
- Simple numerical problems
- Advanced theoretical exercises

The book is a solid reference for professionals as well as a useful text for students in the fields of operations research, management science, industrial engineering, applied mathematics, and also in engineering disciplines that deal with analytical optimization techniques. The logical and self-contained format uniquely covers nonlinear programming techniques with a great depth of information and an abundance of valuable examples and illustrations that showcase the most current advances in nonlinear problems.

From reader reviews:

Patrick Spradlin:

Nowadays reading books become more than want or need but also become a life style. This reading practice give you lot of advantages. The advantages you got of course the knowledge the actual information inside the book that will improve your knowledge and information. The information you get based on what kind of publication you read, if you want have more knowledge just go with training books but if you want feel happy read one having theme for entertaining like comic or novel. Typically the Nonlinear Programming: Theory and Algorithms is kind of guide which is giving the reader capricious experience.

Craig Harrison:

Reading a e-book tends to be new life style in this era globalization. With reading through you can get a lot of information that may give you benefit in your life. Using book everyone in this world may share their idea. Books can also inspire a lot of people. Lots of author can inspire their reader with their story as well as their experience. Not only the storyplot that share in the books. But also they write about the ability about something that you need example of this. How to get the good score toefl, or how to teach your children, there are many kinds of book that you can get now. The authors on this planet always try to improve their talent in writing, they also doing some exploration before they write to their book. One of them is this Nonlinear Programming: Theory and Algorithms.

Peter Wilson:

Playing with family in a park, coming to see the coastal world or hanging out with good friends is thing that usually you have done when you have spare time, after that why you don't try point that really opposite from that. One particular activity that make you not sensation tired but still relaxing, trilling like on roller coaster you are ride on and with addition info. Even you love Nonlinear Programming: Theory and Algorithms, you may enjoy both. It is excellent combination right, you still desire to miss it? What kind of hang-out type is it? Oh come on its mind hangout guys. What? Still don't obtain it, oh come on its known as reading friends.

Rigoberto Stansell:

As a student exactly feel bored to be able to reading. If their teacher questioned them to go to the library as well as to make summary for some publication, they are complained. Just very little students that has reading's internal or real their hobby. They just do what the educator want, like asked to the library. They go to generally there but nothing reading seriously. Any students feel that examining is not important, boring and also can't see colorful photographs on there. Yeah, it is being complicated. Book is very important for you. As we know that on this period of time, many ways to get whatever we wish. Likewise word says, ways to reach Chinese's country. So , this Nonlinear Programming: Theory and Algorithms can make you experience more interested to read.
