Climate Change and Agriculture in India: Studies from Selected River Basins K. Palanisami, C. R. Ranganathan, Udaya Sekhar Nagothu, Krishna Reddy Kakumanu

This book provides an overview of climate change in India using river basin data and analytical and econometric methods. It, *first*, makes a quantitative assessment of how climate change affects agricultural and food production systems; *second*, predicts how these systems may respond to climate change; and *third*, suggests adaptation measures and strategies to improve the income of farmers, increase production, save water and conserve environment. The work will be greatly useful to policy-makers, researchers and teachers of agricultural economics, environmental studies and economics and development studies as also to research organizations dealing with climate modelling and resource management.
